Course code	Category			Course		Host Laboratory Information				Research Description	Pre-Requisites	Maximum number of participants per period	Keywords
	TYPE1	TYPE2	TYPE3	Undergraduate	Graduate	Faculty Member(s)		School/Graduate school	Department				
	32days-3months	Semester Fall 2024	Full-year Fall 2024-Spring 2025			Surname	First Name						
SC24001	○	○	-	○	○	FUKUDA	Jun-ichi	Science	Physics	Theoretical study of soft matter physics (liquid crystals, polymers, glasses, supercooled liquids, etc.) and biophysics. More information can be found at https://www.sci.kyushu-u.ac.jp/e/departments/phys/labo/condensed.html .	Programming experience is desirable, although not mandatory.	1	Soft Matter Physics
						MATSUI	Jun						Liquid Crystal
						TARAMA	Mitsusuke						Polymer
													Glass
													Supercooled liquid
SC24002	○	○	○	-	○	Inagaki	Shio	Science	Physics	Physics of granular matter has been a main research topic in our research group. A collection of dissipative solid particles (granular matter) shows various intriguing phenomena such as size segregation, convective flow, pattern formation, flow clogging, non-Gaussian statistics, etc. We are striving to reveal the fundamental physics of granular behaviors. We mainly work on experiments but also numerical simulations such as Discrete Element Method.	Background in Physics, especially mechanics and statistical physics.	2	Non-equilibrium statistical physics
													Complex systems
													Granular physics
													Molecular dynamics simulation
													Experiments
SC24003	○	○	○	-	○	Tojo	Junji	Science	Physics	Our laboratory carries out a wide range of the experimental particle physics programs. Our focus is especially to search for a new physics beyond the Standard Model of particle physics in high-energy frontier experiments and in several experiments using muon and neutron. Students have opportunities to join those programs.	Experience of general physics experiment and learning of introductory particle physics.	1	Experimental particle physics
SC24004	○	○	○	○	○	Ohba	Masaaki	Science	Chemistry	The Ohba Lab (Physical Coordination Chemistry) focuses on functions and properties of the "space" formed by assembled metal complexes. Our interests are in novel properties based on magnetic, dielectric and luminescence properties incorporated in the framework of space, and functions based on enzyme-metal complex composites. We develop research in the interdisciplinary field of chemistry, physics, and biology with a focus on coordination chemistry.		1	Coordination Chemistry
						Ohtani	Ryo						Metal-organic framework (MOF)
						LeOuay	Benjamin						Metal-organic polyhedra (MOP)
													Functional Material
													Metal complex-enzyme composite
SC24005	○	○	○	○	○	Terasaki	Akira	Science	Chemistry	Physical chemistry of atomic and molecular clusters by means of mass spectrometry and laser spectroscopy. Please visit http://www.scc.kyushu-u.ac.jp/quantum/index_e.php for further information.	Interest in experimental physics and chemistry	2	Physical chemistry
						Horio	Takuya						Nanoscience
						Arakawa	Masashi						Atoms, molecules, and clusters
													Laser spectroscopy
													Mass spectrometry
		Reaction kinetics

	32days-3months	Semester Fall 2024	Full-year Fall 2024-Spring 2025			Surname	First Name						
SC24006	○	○	○	-	○	Hori	Yuichiro	Science	Chemical	In our laboratory, we are developing chemical biology techniques to label and visualize proteins with synthetic fluorescent molecules by devising and applying chemical principles. In living cells, countless biomolecules exist, dynamically changing their localization and controlling cellular events by performing the biomolecular functions in a subcellular region where they are needed. Visualization of the movement of these biomolecules provides important information to elucidate the physiological functions they control. We are developing original technology for fluorescent labeling of proteins to reveal how proteins move in living cells and regulate biological phenomena. Furthermore, we aim to elucidate biological phenomena regulated by nucleic acids, glycans, and extracellular vesicles in addition to proteins, and to control functions of biomolecules at will by making full use of our protein labeling technology.	Knowledge of chemistry and biology	1	Chemical Biology
						Adachi	Junya						Fluorescence imaging
													Protein chemistry
													Synthetic fluorophores
SC24007	○	○	○	-	○	Matsushima	Ayami	Science	Chemistry	http://chem.kyushu-univ.jp/biochem/en/ https://www.sci.kyushu-u.ac.jp/e/departments/chem/labo/struct_funct.html We have a strong interest in the molecular mechanisms of ligand-receptor interaction. Our main research targets are nuclear receptors which precisely regulate gene transcription. We focus on all nuclear receptors to elucidate their activation mechanisms comprehensively. Binding affinity is analyzed in vitro by many techniques, and transcription activity is measured by reporter gene assays using cultured cells.	Comfortable with laboratory animal care (mouse)	1	Nuclear receptor
													estrogen
													transcription
													endocrine-disrupting chemical
													opioid peptide precursor
SC24008	○	○	-	-	○	Yoshikawa	Akimasa	Science	Earth and Planetary Sciences	Various plasma phenomena occurring in "Geospace," the space around the Earth, and the associated space weather phenomena' effects on the Earth are studied using plasma physics, magnetospheric physics, and ionospheric physics. This course is intended for students who are interested in the solar-terrestrial environment and in the future application of space physics to space weather prediction.	The student must have a background in basic physics such as electromagnetism and mechanics, and an interest in space physics.	2	Space weather
													Space plasma physics
													Space and Earth electromagnetism
													Global electromagnetic fields obserbation
SC24009	○	○	○	○	○	Liu	Huixin	Science	Earth and Planetary Science	We study the upper atmosphere (thermosphere/ionosphere) of the Earth, Mars and Venus and their response to solar forcing, and lower atmosphere forcing via atmospheric waves and chemical processes. Ground/Satellite observations, along with model simulations are used to explore the physical and chemical coupling processes between various regions of the atmosphere.	Programing ability with Python or Matlab	3	space weather
													Earth and planetary atmosphere
													Earth and planetary ionosphere
													Earth and planetary thermosphere
													satellite observation
		model simulation

SC24010	○	○	○	-	○	Hamamura	Natsuko	System Life Science/ Science	Biological Science/Dept. of Biology	Due to rapid industrial development, discharge of a wide range of chemicals into the environment has increased dramatically in recent years. Microorganisms inhabit almost every environment on the Earth's surface and play important roles in biogeochemical processes and ecosystem function. Our overall research interest is to understand the complex interactions of microbial community functions and geochemical processes, both of which are influencing each other co-dependently to shape the ecosystem. We are working with natural or anthropogenically-impacted systems to study function and diversity of microbial community in context of ecosystem function, interaction with environmental factors, and physiochemical changes. Interdisciplinary knowledge and research efforts are necessary to link genomics, ecology, and geochemical processes associated with microbial functions in the environments. Topics: 1. Environmental microbiology. 2. Geomicrobiology of metalloids. 3. Microbe-mineral interactions. 3. Microbial ecology in the extreme environment.	Lab work experience (preferably in the areas of microbiology, molecular biology, and/or geochemical analyses) and knowledge of microbiology.	1	bioremediation
													microbial metal transformation
													microbial electrochemistry
													microbial ecology
													environmental microbiology
													geomicrobiology
SC24011	○	○	○	○	○	Eriko	Sasaki	Science	Biology	Our research focuses on the genetic basis of natural variation, such as flowering phenology and genome defense systems, mainly in Europe populations of <i>Arabidopsis thaliana</i> . We aim to understand how plants have adapted to various environmental conditions using genomics, quantitative genetics, and molecular biology approaches. Website (https://sites.google.com/view/erikosasaki-research/home-en)		2	Evolution
													Plants
													Quantitative genetics
													Epigenetics
SC24012	○	○	○	○	○	Arakaki	Seiji	Science/ System Life Science	Biology/ System Life Science	Our laboratory, the Amakusa Marine Biological Laboratory, is located in western Kyushu (far away from the main campus). The AMBL aims at elucidating how a multitude of species can coexist and maintain ecological assemblages under different environmental conditions and evolutionary backgrounds. (Website) http://amb1-ku.jp/		1	Marine
													Community
													Ecology
													Coastal Ecosystems
MA24001	○	○	○	○	○	Masato	Tsuji	Mathematics	Mathematics	I am interested in dynamical systems, which describes deterministic time evolutions that appear in many fields of sciences. More specifically I am studying smooth ergodic theory which describes long-time statistical properties of dynamical systems generated by smooth vector fields or smooth maps.	Calculus and Linear Algebra.	2	Dynamical System
													Ergodic Theory
													Chaos
													Fractal
													Strange Attractor
													Fractal dimension

MA24002	○	○	○	○	○	Kajiwara	Kenji	Mathematics	Mathematics	Differential geometry of smooth/discrete curves and surfaces, integrable systems, geometric shape generation. Applications to architecture design and industrial design.	Knowledge of fundamental calculus, linear algebra, differential equations, and preferably, geometry of curves and surfaces.	1	Curves and Surfaces
													Integrable Systems
													Geometric Shape Generation
													Differential Geometry
MA24003	○	○	○	○	○	Kaji	Shizuo	Mathematics	Mathematics	Professor Shizuo KAJI works in the field of applied topology. His research interests include topological data analysis, geometric models of graphs and other discrete structures for machine learning, and 3D shape analysis and design. Please visit his web page at https://www.skaji.org for more information.	Knowledge of undergraduate mathematics such as linear algebra, calculus, point set topology, and metric space	2	Topological Data Analysis
													Geometric Representation Learning
													Geometric Shape Design
													Applied Topology
MA24004	○	○	○	○	○	CESANA	Pierluigi	Mathematics	Mathematics	My Lab focusses on two main lines. 1) (more classical) Partial Differential Equations and Continuum Mechanical models for smart materials. This includes Shape Memory Alloys, Liquid crystals and more. Some of this work in collaboration with Caltech and Oxford groups. See: https://arxiv.org/abs/2207.02511 https://arxiv.org/abs/1501.06859 2) Artificial Intelligence and Machine Learning methods for the accelerated design of molecules and materials for targeted applications in electronics, semiconductors, etc. See: https://linkinghub.elsevier.com/retrieve/pii/S2666827022000093	Flexible as various projects will be available based on each student's background.	2	Partial Differential Equations
													Plasticity
													Dislocation
													Disclination
													Liquid crystals
		Continuum Mechanics											
		Calculus of Variations											
		Cellular Automata											
		Machine Learning											
		Quantum chemistry											
		Density Functional Theory											
MA24005	○	○	○	○	○	Hiroshima	Fumio	Mathematics	Mathematics	I am studying the spectral analysis of operators on an infinite dimensional space. Especially, from the mathematical standpoint, we investigate the quantum field theory on pseudo-Riemannian manifolds by using operator theory, micro-local analysis, theory of one-parameter semigroup, stochastic analysis, functional integral.	Knowledge of measure theory, linear algebra, general topology	1	quantum field theory
													path integral
													functional analysis
													spectral analysis
													measure theory
		mathematical physics											
MA24006	○	○	○	○	○	Ochiai	Hiroyuki	Mathematics	Mathematics	Professor Ochiai works on Algebraic Analysis, including Special Functions, Hypergeometric functions, Representation Theory of Lie groups and Lie algebra, D-modules	Calculus and Linear algebra are necessary.	2	Algebraic Analysis
													D-module
													hypergeometric function
													spherical function
													Hecke algebra
		Lie group

MA24007	○	○	○	○	○	Nguyen	Dinh Hoa	Mathematics	Mathematics	Professor Nguyen's research is on the modeling, optimization and control towards clean and autonomous power and energy systems. His particular interests are on distributed control and optimization; multi-agent systems; integration of renewable and distributed energy resources; stability, robustness and resiliency of smart grids. For more details, please see: https://sites.google.com/site/dinhhoanguyensite	Basic programming; Linear Algebra; Ordinary Differential Equation	1	Control Theory
													Smart Grid
													Optimization
													Multi-Agent System
													Renewable and Distributed Energy Resources
				Artificial Intelligence									
MA24008	○	○	○	○	○	Matsue	Kaname	Mathematics	Mathematics	Research interests in this Lab are mainly twofolds. 1: Dynamical Systems. Based on (ordinary) differential equations, various complex, singular behavior are studied. Recently, blow-up solutions and singular perturbation problems are mainly studied. 2: Numerical Analysis with application to dynamical systems. Singular nature in dynamical systems is also studied from the viewpoint of numerics. Numerical difficulties in these problems are our issues here. As an application, the following topic is also studied. 3: Combustion.	Knowledge of undergraduate level mathematics. Basic programming skills (like C or Python) are preferable to have. Students who are interested in Topic 1 (in Research Description) are strongly welcome.	1	Dynamical Systems
													Numerical Analysis
													Singular Perturbation, Blow-up
													Complex Systems involving Combustion
MA24009	○	○	-	○	○	Fukumoto	Yasuhide	Mathematics	Mathematics	This course is to conduct a mathematical modeling of fluid phenomena in terms of partial differential equations, an asymptotic analysis for getting an essential information of their solution and a numerical calculation of the full solution.experience, with its feedback to the phenomena. Specific targets are vortex dynamics, stability of fluid motions, magnetohydrodynamics, flows through porous media, flood of rivers, combustion.	Communications are made in English	2	Fluid mechanics
													Hamiltonian mechanics
													Hydrodynamic stability
													Vortex motion
													Magnetohydrodynamics
				Combustion									
MI24001	○	○	○	○	○	Ta	Ton	Joint Graduate School of Mathematics for innovation	Agro-Environmental Sciences	Mathematical Modeling Lab website: http://www.agr.kyushu-u.ac.jp/lab/ta/ We study various real-world phenomena by using stochastic ordinary/partial differential equations, statistical models, or deep learning. Some topics include Fish Schooling, Forest Ecosystem, Weather Prediction.	Love mathematics or applied statistics or programming (MATLAB, Python,...)	2	Stochastic differential equations
													Fish schooling
													Deep learning
													Applied statistics
													Forest ecosystem
				Stochastic evolution equations									
SL24001	○	○	○	○	○	Kenshi	Hayashi	System Life Science	Electronics	Hayashi Lab/Organic Electronics Lab is focused on bio-mimetic/organic material devices, which detect odor information. Espetially, odor imaging device for robotic application based on two dimensional plasmonic materials and molecular selective materials, which realize high-sensitive, high-speed and high throughput visualize spatiotemporal changes of chemical space. Fully inkjet printed sensor devices are also researched.		2	gas sensor
													plasmonic device
													nano material
													IoT application
													sensor robot application

SL24002	○	○	○	○	○	Iramina	Keiji	System Life Science	System Life Science	Iramina lab is focused on neuroimaging, Biomedical engineering, and Neuroengineering. We study in the fields of the measurements of brain function by EEG and NIRS, the development of measurement technology. The elucidation of the mechanism of brain function is one of foundations of life science, and it can be applied to almost all the fields. Have a deep understanding of brain information processing, and apply the research results to fields of life science, medicine, welfare and education is the purpose of our study.		4	Neuroimaging
													Neuroengineering
													Biomedical engineering
SL24003	○	○	○	○	○	Lauwereyns	Johan	Systems Life Sciences	Systems Life Sciences	The Lauwereyns Lab hosts research in the areas of cognitive science and bioethics, particularly with respect to meta-decision-making and cognitive biases. We typically use eye-tracking, biometrics and behavioral measurements in our research.	One of the following is required: 1) have studied experimental psychology or cognitive science; 2) have studied bioethics; 3) have good programming skills (Python); or 4) have good statistical skills (particularly ANOVA).	2	Bioethics
													Cognitive biases
													Meta-decision-making
SL24004	○	○	○	-	○	Arata	Jumpei	Systems Life Sciences	Systems Life Sciences	Our research aims at new medical applications based on Robotic technology. Robotic technology includes many elements – mechanism, sensor, control, system integration and etc. We study about these elements to realize further effective medical applications. Visit our website for more details: https://amd.mech.kyushu-u.ac.jp/	Fluent English conversation skills. Basic knowledge of Mechanical Engineering (Mathematics, Mechanics, Mechanical Design)	1	Robotics
													Medical Application
													Surgical robots
													Rehabilitation robots
													Bio sensors
			Brain-Machine Interface										
SL24005	○	○	-	-	○	Katayama	Yoshiki	Systems Life Sciences	Systems Life Sciences	We are trying to create a new concept of biomedical technology by gathering all the related knowledge. We are a heterogenous group composed of chemists, molecular biologists, pharmacologists, medical scientists, and veterinarians. -"Human Orthogonal Enzymes" for High-Quality Diagnosis -"Re-directional Pharmaceutics" -Development of Gene-Engineered Macrophage Drugs - Bio-invisible Polymers -"Prevention Medicine" by Long-lasting DDS -Bio-polyion complexes for Cellular Mimetics & Therapy - Efficient Induction of Immune tolerance (Website) https://sites.google.com/view/katayamalab	Knowledge of basic chemistry or basic life sciences.	1	Biomaterials/Bioengineering
